

Solution Architect

Brunel Australia are looking to speak with experienced Solution Architects for a major client in the mining sector. As the successful applicant you will play a key role in shaping, implementing and leading the technical delivery of data architecture, platform architecture and software engineering.

Summary

- Publication: PUB297347
- Market: OilGasAndMining
- Industry: Mining
- Area of expertise: Engineering & Design
- Hours per week: 40
- Education level: Professional Bachelor
- Closing date: Thursday, 4 March 2021

Job

Working closely with Data Engineers, both from an architectural design perspective as well as hands-on-keys technical solution development. Extremely hands-on environment.

About you

- Responsible for the end-to-end delivery of data architectures to meet customer requirements
- Work closely with the Product Owner and Iteration Manager to manage the delivery of the data architectures
- Drive cloud native data approaches whilst maintaining a cost-efficient design
- Advise Digital Teams on how best to use data within their applications
- Knowledgeable in data lifecycle, data Governance, including data discovery and curation, data management and quality
- Ability to provide leadership in product quality, technical excellence and engineering practices
- Experience deploying applications into production environments e.g. code packaging, integration testing, monitoring, release management
- Working knowledge of Agile methodology and aligning the key solution architecture components
- Experience working with structured, semi-structured, and unstructured data, extracting information and identifying linkages across disparate data sets
- Experience with building cloud native big data platforms & building data pipelines.

What we offer

In order to attract the right level of individual our client has ensured a competitive rate. Brunel provide end to end support prior during and after your contract to ensure a seamless experience.
