

Study Manager

We are hiring a Study Manager for our client an Australian Engineering company focused on leading mining projects.

This individual will be working with world-class clients to bring solutions that are as imaginative as they are inspiring. They will thrive on taking on the challenging projects to deliver outstanding results for our clients and outstanding opportunities for our people. As this is a leadership role, firm client focus and ability to relate to clients and respond to their requirements is a must. The nature of our work requires both divergent and convergent thinking – that is combining innovative approaches with meeting scope, budget, schedule and specifically working to deadlines.

Summary

- Publication: PUB298506
- Market: OilGasAndMining
- Industry: Mining
- Area of expertise: Engineering & Design
- Hours per week: 40
- Education level: Academic Bachelor
- Closing date: Monday, 26 April 2021

Job

Responsibilities:

- Oversee the successful execution of studies / projects to ensure safety, quality, timeliness and profitability.
- Lead regular reviews and audits of study timelines, budgets and resources to identify areas of concern and resolve issues.
- Conduct weekly reviews to determine on-going project schedules and budget.
- Develop and maintain relationships with global subject matter experts and ensure appropriate utilization to bring value and innovation to studies.
- Assist in establishing project strategy and monitor critical path schedules and deliverables.
- Develop and maintain collaborative working relationships with management, clients, team members, and other key stakeholders.
- Ensure that study and project risks are adequately addressed and communicated to the leadership team.
- For larger complex projects, review execution plans to achieve project milestones and to minimize costs for several different project areas.
- Comply with all minerals corporate policies and procedures by adopting Quality Assurance and Occupational Health, Safety, and Environment policies, procedures, and requirements.

About you

Requirements:

- In-depth and relevant experience in the mining industry with strong base metals and mineral processing experience.
- Extensive experience in the development, delivery, and operation of mining or mineral processing studies and projects.
- Previously worked on a client/owner`s team or been a study manager, area manager, engineering manager or lead engineer on several projects/studies would be an asset.
- Excellent written technical and oral communications skills.
- Demonstrated leadership and management skills.
- Willingness to travel when required.
